

What's for Lunch?

Halibut are eager eaters and will nibble on just about anything smaller than themselves.

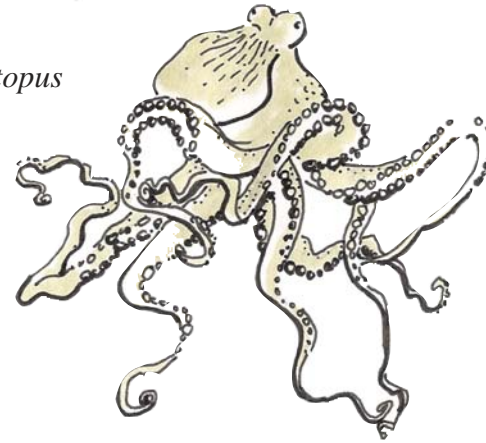

Shrimp

As halibut get bigger, so does their food. Small crabs and shrimp are fair game for the halibut youngster.

Octopus

After a few years and a few hard-earned pounds on their bodies, halibut can move on to bigger prey. They are strong swimmers and can go after other fish, squid, and octopus, or they may choose to snack on the tasty crabs and shrimp that they discover.

Crab
